Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ **Make non-commercial use of the files** We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ **Refrain from automated querying** Do not send automated queries of any sort to Google’s system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ **Maintain attribution** The Google “watermark” you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ **Keep it legal** Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can’t offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book’s appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google’s mission is to organize the world’s information and to make it universally accessible and useful. Google Book Search helps readers discover the world’s books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at [http://books.google.com/](http://books.google.com/)
THE SENTENCE METHOD OF READING

Farnham
PREFACE

In his experience as teacher and superintendent of schools, it became evident to the author, many years ago, that there was something fundamentally wrong in the ordinary methods of teaching reading, writing, and spelling. Viewed from the standpoint of economy, the result bore no just ratio to the time and effort devoted to these branches; and viewed from the stand-point of education, the first years of instruction seemed imperfect and unsatisfactory. This conviction, which he shared with many teachers throughout the country, led to examination and experiment.

In 1858 the phonetic system was introduced into the schools of Syracuse, N. Y., and for a time it was thought that the true method of teaching children to read had been discovered. After a trial of five years, however, it was seen that while pupils learned to read by this method in much less time than usual, and attained a high state of excellence in articulation, their reading was nearly as mechanical as be-
fore, and few of them became good spellers. The two systems of analysis, phonic and graphic, had so little in common that permanent confusion was produced in the mind.

The word method, next tried, was much more productive of good results than any that had preceded it; yet by this method words were treated as units, independent of sentences, and reading almost of necessity became a series of independent pronunciations, perpetuating the mechanical results of the old methods.

These experiments and their result led to further investigation, especially in the line of psychology. From a close observation of the action of the mind, and of the relations of language to thought, it was seen that the unit of thinking is a thought, and therefore that the unit of expression is a sentence. The obvious deduction was, that the sentence ought to be made the basis of reading.

In 1870 a series of experiments was instituted in the schools of Binghamton, N. Y., to subject this theory to a practical test. The results far exceeded expectation in the direct teaching of reading, spelling, and writing; and led to other results in awakening mind and in influencing conduct which were
unexpected and gratifying. It is safe to assume that the problem how to teach these branches successfully has been solved.

This little manual is substantially a record of the plans adopted, and of the principles involved in these experiments at Binghamton. It is published with the hope that it may prove a help to those who have no time or opportunity for original experiment, and an incentive to further investigation in this direction.

The author hereby expresses his obligations to his friend James Johonnot, for valuable assistance in the final preparation of this work. The large experience of this gentleman as an educator, and his sound judgment in all matters of education, were constantly laid under contribution when this problem was worked out.

COUNCIL BLUFFS, IOWA, January 1, 1881.
INTRODUCTION

Goethe says, “Let no man think he can conquer the errors of his youth. If he has grown up in enviable freedom, surrounded by beautiful and worthy objects; if his masters have taught him what he first ought to know for more easily comprehending what follows; if his first operations have been so guided that, without altering his habits, he can more easily accomplish what is excellent in the future; then such a one will lead a purer, a more perfect and happier life than another man who has wasted his youth in opposition and error.”

This statement is an admirable summary of our most advanced ideas concerning education. In our educational processes we have but to ascertain the manner and order in the use of intellectual faculties and power in performing real life work, and then guide and direct the study of the youth, that they may acquire the use of their powers in the same manner and order.

Some years since, while engaged in a business
that brought me in contact with large numbers of literary, business, and professional men, I instituted a series of inquiries in regard to their habits of reading, writing, and spelling. From the answers received several items of interest were evolved.

First, Spelling. My question was “When in doubt in regard to the spelling of a word, how do you assure yourself?” The answer, in substance, was, “I write the word, and when it looks right, I assume it is correct.” Upon further questioning, they were unanimous in the statement that they had adopted this method as a necessity after they had left school and entered upon the active duties of life. Only three or four, out of some hundreds questioned, thought of the word as they had learned it from the spelling book, and these were teachers.

Second, Reading. In regard to reading I found that most of those who had learned to read in school were slow readers, pronouncing the word mentally, if not aloud. Many found it difficult to take in the author’s meaning without pronouncing the words audibly. On the other hand, those who had learned to read at an early period before attending school, and many of whom could not remember the time they could not read, were rapid readers. Their eye
would pass over the page with little or no consciousness of the words, and they would take in the thought of the author much more rapidly than if the words were pronounced. These persons had acquired the art of reading without conscious effort on their part or on the part of others. Such persons could always spell, and they were able to detect a misspelled word in the most rapid reading. They were also usually fluent writers.

*Third*, Penmanship. The results of observation and inquiry in regard to penmanship were equally interesting. Persons who do much of original composition are seldom good penmen. I have never found a person who composed in the hand taught and practised in school. Most who practised some one of the conventional systems for years in schools, abandoned it when called upon to perform real work, only to acquire a hand ugly in appearance, and difficult to decipher.

The conclusions drawn from these facts are:—

*First*. That the methods in spelling and penmanship, upon which so much time and labor have been bestowed in the school, are laid aside the moment the student enters upon the active duties of life; and that for the performance of these duties
he is obliged to form new habits under the most unfavorable circumstances.

Second. That there is sufficient uniformity in the methods practised in after life, and adopted without instruction, to warrant the assumption that they are best adapted to real work, and therefore should receive attention from educators.

Third. That in reading, the work of the school, with all its rules and systems, is immeasurably inferior in results to the unsystemized and incidental work of the home.

Fourth. That where habits have been established by school drill they often prove hindrances rather than helps, and ever after there is vain endeavor to escape from their thraldom.

It is in view of these facts, more or less distinctly recognized, that experiments are being extensively made to bring our schools more into harmony with the real activities of mature years; to give to the pupil not only the tools of knowledge, but the mastering of the use of these tools in the discovery of knowledge and its application to human purposes, precisely as he must do in any vocation to which he may apply himself.

The design of this manual is to aid in this work.
THE SENTENCE METHOD

It is hoped it may prove a help to many teachers who have long been conscious of the defects of the old systems, but have not had time or opportunity to work out a method satisfactory to themselves. The methods here presented are not merely theoretical. They were elaborated after careful study and then subjected to experiment and correction, and as here given they are such as have survived the ordeal and have borne abundant fruit.

It is believed that parents will find here a simple process of teaching reading, writing, and composition to their children which will cause little interruption of the daily duties. Indeed the well regulated home is without doubt the best primary school.
THE SENTENCE METHOD
OF TEACHING

Reading, Writing, and Spelling

CHAPTER I

FIRST PRINCIPLES

Definition. Reading consists:—first, in gaining the thoughts of an author from written or printed language:—second, in giving oral expression to these thoughts in the language of the author, so that the same thoughts are conveyed to the hearer.

It is important that this two-fold function of reading should be fully recognized. The first, or silent reading, is the fundamental process. It is often called "reading to one's self," a phrase significant as indicating a wrong conception of the true end to be accomplished. The second, oral reading, or "reading aloud," is entirely subordinate to silent reading. While oral expression is subject to laws
of its own, its excellence depends upon the success of the reader in comprehending the thought of the author. The importance of these distinctions is so great that I will consider them in detail.

**Silent, or Eye Reading.** It is scarcely possible to exaggerate the importance of correct "eye reading;"—of the ability to look over the written or printed page, and, with the least possible consciousness of the words used, fully to comprehend the thoughts expressed.

A common process is indicated by the expression, "reading to one's self." This means the translation of written into oral language. The reader either pronounces each word so that he can actually hear it, or he thinks of the pronunciation. In either case the thought is not formed in his mind directly through the written language, but indirectly after the written words have been changed into oral expression. This process is slow and laborious, it becomes painful when long continued; and its practice will account for the antipathy which so many persons have to reading books and articles of considerable length.

The object in teaching should be to make every pupil an eye reader,—to give him the ability to look
directly through the written expression to the meaning, or to detect at once the unknown elements that prevent the accomplishment of this object.

A New Use of the Eye. The ordinary function of the eye is to take in the visible characteristics of objects. This is the use to which all children have become accustomed, and they form judgments in accordance with perfect confidence. No child doubts his ability to distinguish his friends, his toys, or any object to which he may direct his attention. Through this sense, aided by touch, he comes into possession of most of his knowledge of the external world. The knowledge so obtained is direct and tangible.

With hearing it is different. While the ear recognizes sound as sound, it has been accustomed from the earliest period to recognize thought through the sound of oral language, until the thought becomes primary in one's consciousness, and the sound of language secondary. Indeed, language becomes so purely representative of thought, that, as sound, it scarcely appeals to consciousness. The child associates speech with thoughts divined from his experience, and never regards it as having a separate existence. The words he hears quicken thought
into conscious activity, and he in turn is impelled to express his thought by the use of words.

The child has come into possession of his powers, both of thought and of expression, by a gradual and unconscious process. He has simply been shaped by his surroundings. By association with those who talk, he has acquired the power of understanding speech and of speaking. The kind of speech which he hears, whether perfect or imperfect, he reproduces.

This fact should be distinctly understood and realized. The powers of speech and of understanding what is said, both come to the child by a process so simple and natural that he is conscious of no effort to acquire them. Speech, objectively considered, is only a combination of sounds uttered in quick succession, having not the slightest resemblance to the thoughts represented; but by the child it is understood with exactness and uttered with precision. The whole complicated process is matured without effort, and without the intervention of teachers.

To make the eye perform the office of the ear, and the hand that of the organs of the voice, is the problem that presents itself in attempting to teach a child to read and to write. The vital point is so to change
the function of the eye that it will look upon written or printed characters, not as objects to be recognized for their own sake, but as directly calling past experiences into conscious being, and so becoming representative of thought. All the efforts of the teacher should be directed to this end.

At this point our education has often failed. The process of translating the written language into speech is so slow and difficult that a large share of the pupils of our schools are condemned to comparative ignorance. The words as they appear have no meaning to them. One who has acquired the power of directly receiving thought from the printed page, is endowed with a new intellectual faculty. His eye flashes along the pages of a book, and he comprehends whole sentences at a glance. It would not do to say that these rapid readers do not understand what they read. The fact is they understand much better than the slow reader. The mental power, being relieved from the necessity of translating, concentrates itself upon the thought, and the thought is understood and remembered. Our endeavor should be to give the pupils this power of eye reading from the first, so that they may continually profit by it and have no evil habits to overcome.
Oral Reading. When the habit of sight reading is acquired, oral reading will need but little attention. The oral expression is subordinate to correct eye reading, and its acquisition is largely incidental. When the pupil has power to take in the thoughts from the printed page directly, he will have but little difficulty in giving it proper oral expression in the language of the author. The pupil, being under the control of the thought obtained, must read the thought as naturally as he speaks.

In oral reading there are always two parties, the readers and the hearers. It is as important that pupils should be taught to obtain thoughts by listening as by reading; and to this end the other members of the class should close their books while one is reading, the test of the value of the exercise being their ability to reproduce the thoughts which they have heard.

Writing. While the pupil is acquiring this new use of the eye, and learning to read in the true significance of that term, he should be taught to write. This process is simply the production of the forms which represent thought, and which quicken thought in him. While silent reading is analogous to obtaining thought from the speech of others, it should
be so presented to the pupil that he acquires it unconsciously while endeavoring to express his thought, and the exercise should be continued until the habit is formed of the hand responding as directly as the voice to the mind and to the mandates of the will.

First Principle. The first principle to be observed in teaching written language is that “things are cognized as wholes.” Language follows this law. Although it is taught by an indirect process, still, in its external characteristics, it follows the law of other objects.

The question arises, what is the whole? or what is the unit of expression? It is now quite generally conceded that we have no ideas not logically associated with others. In other words, thoughts, complete in their relations, are the materials in the mind out of which the complex relations are constructed.

It being admitted that the thought is the unit of thinking, it necessarily follows that the sentence is the unit of expression. One can assure himself of the correctness of this view by watching the operations of a little child, even before it is able to talk. You may give such a child any direction which you expect will control its action, and leave out any part of the sentence that is essential to its completeness,
and the child will not be influenced by it. It is true that elliptical expressions are sometimes used, but the missing portions are supplied in the mind, before action is produced. Let any one attempt to remember a series of words so arranged as to express no complete thought, and he will see how absolutely we are dependent upon the logical arrangement of language. A speaker will have no difficulty in making himself understood in any part of a large room, if he addresses the audience in connected and logical discourse. No one listening will be conscious of losing a single word of what is said. But let the same reader attempt to read the names of a dozen persons, or give a list of disconnected words, and he will hardly be able to pronounce them with sufficient distinctness to be understood, without repetition.

Second Principle. A second principle is, we acquire a knowledge of the parts of an object by first considering it as a whole. Repeated recognitions reveal the characteristics of the whole, so as to separate it from other things. We descend from the contemplation of the whole to the parts that compose the whole. Otherwise the parts would be more distinctly remembered than the whole. But this is contrary
to experience. We have no difficulty in distinguishing one person from another, but if called upon to state exactly in what this difference consists we should be at a loss for a satisfactory reply, unless we have made the matter an object of special attention.

That words are no exception to this rule is obvious from the almost universal practice of writing out the word and looking at it as a whole to determine whether it is properly spelled. We have more confidence in our judgment of the appearance of a word as a whole, than in our ability to reproduce it in detail, notwithstanding this latter method is the one in which we have been drilled.

The sentence, when properly taught, will, in like manner, be understood as a whole, better than if presented in detail. The order indicated is, first the sentence, then the words, and then the letters. The sentence being first presented as a whole, the words are discovered, and after that the letters composing the words.

Third Principle. The third principle is that while language, oral or written, follows the laws of other objects so far as its material characteristics are concerned, it differs from other objects studied for
their own sake, by being representative in its character. While it is to be recognized, it must be so recognized as to make the thought expressed by it the conscious object of attention.

In oral speech this is already the case. The written language is to be so acquired that the same results will follow. To do this, it must be taught by an indirect process. The language must be learned while the attention is directed to the thought it represents.

**RECAPITULATION**

*First.*—Things are recognized as wholes.

*Second.*—Parts are recognized while contemplating the wholes.

*Third.*—The whole or unit in language is the sentence.

*Fourth.*—Words, as parts of a sentence, are discovered while recognizing the sentence.

*Fifth.*—Letters are discovered while contemplating words.

*Sixth.*—Language, especially written language, is to be learned indirectly, while the attention is directed to the thought expressed.

**Practical Hints.** Before attempting reading, a child should be able to use language with considera-
ble care and fluency. Few children attain this power before the age of six years. The child must also be made to feel at home in the school room and in the presence of his teacher. Without this freedom, the teacher can never judge correctly concerning the mental condition of the child. The timidity and self-consciousness of pupils when first entering school, cannot be overcome by direct teaching. The change of condition from home to school should be made as slight as possible, and the teacher should study to enter into the thoughts and feeling of the child. When sympathy is fully established between teacher and pupil, and the pupil feels as unrestrained as at home, the conditions for successful teaching are secured.

The class should be as devoid of formality and constraint as is consistent with the successful working of the school. Order for order's sake is not desirable. Requiring pupils to "toe the mark" or to assume any precise attitude distracts their attention from the lesson in hand, and tends to make machines of them and to deprive them of all spontaneity in action.

Children of ordinary health and intelligence are always active. To compel quiet for any consider-
able time is to do violence to child nature. Neglecting to provide for natural and necessary exercise is to convert the school room into a prison house. The mistake is often made of making education consist of repression instead of development, and natural activities indispensable to achievements are ruthlessly sacrificed to an ideal discipline, where quiet must be maintained at all hazards.

Slates and pencils are acknowledged necessities, and as the child acquires the use of his powers they will be in constant requisition. Provision should also be made for the unconstrained exercise of the pupils, that will interest them and not disturb the school. A vacant corner in the school room, or a platform raised a few inches above the floor and supplied with blocks for the children to play with, would meet this demand. Building blocks may be easily and cheaply obtained by taking a common board dressed on both sides, three-fourths of an inch thick, and sawing it into strips one and one-half inches wide. These strips should then be sawed into pieces three inches long, giving to the blocks the relative proportion of bricks. A few pieces should be left six inches long, and a few of the common bricks sawed in two, to give variety to the combinations made.
CHAPTER II

EXERCISES BEFORE BOOKS ARE USED

FIRST STEP

The object of this step is to awaken thought in the
mind of the child by means of objects, and to give to
the thought complete oral expression.

The teacher should be provided with a number of
objects such as may be readily handled. At first
those only should be used that will admit of the use
of the article a before the name.

With Objects in Hand. First.—Let the teacher
and each pupil take an object in hand.

The teacher will call upon one of the pupils to tell
what he has, and in reply the pupil will probably
hold up the object and pronounce its name.

Teacher—"Jane, what have you?"
Jane—"A pencil."
Teacher—"Who has a pencil?"
Jane—"I have."
Teacher—"Now tell me all about it."

(28)
Jane—“I have got a pencil.”

Teacher—“Very well. But will one of you tell me what he has, and leave out the word ‘got’?”

Charles—“I have a knife.”

Teacher—“That is right. Now Jane will try again. Tell me what you have.”

Jane—“I have a pencil.”

It is best to secure the proper expression from the children, though it may take some time. But if the teacher fails in this, she will hold up her own object, and say, “I have a book.” Then call upon one of the children, who will very likely respond properly, “I have a knife.”

The form of expression once obtained, there will be very little difficulty in obtaining the similar expressions from each member of the class. Let each hold up his object and tell what he has. This done, let the children change objects, and repeat the exercise, telling what each one has.

Second—Next let two or three children take hold of the same object, and let one of them make the statement, “We have a doll.”

At first, the children may be inclined to continue the old form of expression, and the teacher may be obliged to take hold of the object and make the
proper statement, but the children will readily take the hint. Now, vary this form with the first, until the children will instantly respond with the proper expression.

Third—Let one pupil hold an object and call upon another to make the statement. If a boy has the object, the response will be “He has a knife;” if a girl, “She has a pencil.”

Fourth—The teacher will hold an object, and the pupil will make the statement to the teacher, “You have a map.”

Fifth—Two or more members of the class will hold an object, and one of the others will make the statement to the teacher, or to the remaining members of the class, “They have a book.”

These forms of expression will be repeated and changed in their order until there is no confusion or tendency to error in expression. The children should instantly respond with the appropriate expression.

Each teacher will select such objects as the circumstances may require. The following list may serve as a hint to the kind of objects which may be used. When the object cannot be used, a toy or picture representing it may be substituted.
Book, slate, pencil, paper, knife, string, board, chalk, desk, seat, table, door, window, hat, cap, boot, shoe, clock, watch, doll, match, wood, stove, girl, boy, man, woman, house, barn, dog, cat, cow, horse, rat, pig, sheep, glass, nail, etc.

In regard to words other than the names of familiar objects, the book which is to be used should be taken as a guide.

**With the Object in Sight.** *First*—Place an object before the class, and call upon a child to tell what he sees, and he will respond, “I see a hat.”

Let another speak for himself and his companions with “We see a clock.” Introduce the other pronouns with the verb see, as in the previous exercises. Next introduce other verbs. A girl walks across the floor, and the expression, “She walks,” is elicited. A boy will run, and the expression, “He runs,” will be obtained.

**Second**—Introduce the names of the different members of the class, and use them in the place of the pronouns in the previous exercises. Secure variety by using different verbs, as, “John sees the clock,” “Susan heard the watch tick,” “James ran home.”

**Third**—Call attention to qualities of objects and
secure the appropriate expression, as, "John has a large book," "Jennie has a white cat," "The black dog barks."

The following list of qualifying adjectives is given by way of suggestion.

Black, white, red, yellow, blue, green, brown, large, small, little, big, good, bad, lazy, bright, tall, short, hard, soft, rough, smooth, pleasant, light, heavy, dark, etc.

*Fourth*—Call attention to the position of object, and secure the proper expression, as, "The book is under the desk," "The bird flew over the tree." Continue this exercise until the more common prepositions have been used.

With one or more objects, expressions containing conjunctions and the plural form of the verb may be obtained, as, "A slate and a book are on the table," "John and Charles run," etc.

In general, any form of expression in common use may be obtained from the children by forming the proper concrete relations. These exercises constitute lessons in constructive language or composition, and should be continued until the children respond readily with the expression representing the exact relations of the things to which their attention is called.
This exercise may be varied by introducing object lessons with such simple descriptions as the children themselves may give. The children should also be encouraged to tell in complete sentences what they see out of school, on their way to and from school, and at home. They should give accounts of any interesting event which has happened to them, or which they may have observed. These exercises are especially valuable as preparing for the next step.

SECOND STEP

The object of this step is to awaken in the mind of the child the exact thought contained in oral expression, and to lead him to make the appropriate concrete representation.

In observation we pass from the thought to the expression; in reading, from the expression to the thought. This step is to make clear that thought may be obtained from oral expression, as preparatory to the final step of obtaining thoughts from written expression.

The teacher will make a statement, as, “I have a knife,” and will then ask, “What do I have?”

Pupil—“You have a knife.”
Teacher—"How do you know that I have a knife?"

Pupil—"You said so."

The teacher will show the knife to confirm the statement.

The teacher will next call upon different members of the class to state what each has, confining the inquiries at first to objects at hand, and producing the object to confirm the statement.

Passing away from visible objects the children may be called upon to tell what they have at home. John may say, "I have a large, black dog," and Jane, "I have a nice doll." The thoughts formed in the minds of the children are as vivid and as true as though verified by the production of the real object.

This step is a short one, and will require only a few exercises to accomplish its object.

THIRD STEP

The object of this step is to awaken in the mind of the child the exact thought contained in written expression, and to enable him to express the thought in the language used. This is Reading.

While of necessity, in reading, the expression pre-
cedes the thought, no lesson will be a success when the expression fails to awaken the thought. The order in the third step is the same as in the second, with the substitution of written for oral expression.

The teacher goes to the board, and in a clear, bold hand writes a sentence, as: "I have a knife." The pupils see the writing, but of course do not know what it means. The teacher will call a pupil and put a knife into his hands, and the pupil in response to the impulse which is the result of previous training will instantly hold up the knife and say, "I have a knife."

The teacher writes another sentence, as, "I have a pencil," and puts the object in the hands of another child, who will respond, "I have a pencil."

The teacher will proceed in the same way until several children have objects in their hands, representing as many sentences upon the board.

The teacher will next call upon the first child to point out and read his sentence, which he will readily do, as he still holds the object in his hand.

Each child, in turn, will be called upon to point out and read his particular sentence. When several are written upon the board, some child may forget which represents his statement, in which case the
teacher will take the pointer and pass it over the sentence from left to right. The child will point out the sentence in the same manner, at the same time giving the oral expression. The pupil should not be allowed to guess, but when he hesitates, the teacher should point out the sentence for him.

Next, the pupils may exchange objects, and point out the sentence that expresses the new order of things under the same condition as before. It may be necessary frequently to erase sentences before the lesson is finished, but this will prove a help rather than a hindrance, as the pupil will more readily observe and remember the sentences by seeing them written.

These lessons are to be continued day after day. Care being taken to vary the order and the objects, so that the children cannot recall the sentences by their location. The teacher's faith and patience may be severely tried, but steady progress is made. Each repetition strengthens and deepens the impression, until the association of the thought with its written representative is firmly made.

The objects used should be kept upon a table in sight and reach of the pupils. When a new sentence is written, the teacher may hand the object to
the child, or point it out, allowing the pupil to take it himself. By varying the exercises in this manner, great activity may be secured on the part of the class.

A little further along the teacher may wait to give the pupils an opportunity to select the object without its being pointed out. When a child raises his hand and expresses a desire to do this, it shows that he has read the sentence, and is acting in obedience to the impulse occasioned by a comprehension of the thought. The oral reading follows as a natural consequence.

The trying point is now past. One after another will follow the example of the first, and read the sentences as they are written, independent of aid from the teacher. The child will indicate that he has read the sentence by raising his hand, and then, when permission is given, by selecting the proper object and "making it true," as the children express it, and by reading the sentence aloud with the object in hand.

An emulation will probably be excited, and each child will try to be the first to read. This may lead to guess-work on the part of the child, which the teacher will at once try to repress. The raising of
the hand should be permitted only when the sentence has been read and the thought understood.

It is an easy matter to raise a false enthusiasm, indicated by raising the hand, snapping the fingers, rising from the seat, and various exclamations. These manifestations should be repressed, and that real enthusiasm stimulated which comes from certainty of results.

When a child reads a sentence from the board, he should indicate it by the pointer. At first the pupil will probably switch the pointer across the sentence and read it hurriedly at the same moment. These are symptoms of natural and healthful action, indicating that the thought is in the mind, and that the sentence is the unit of expression. The motion and utterance are simply in obedience to the impulse to speak the sentence as a unit. A little experience will serve to correct all that needs correction.

Variety in Expression. In using the first form of the sentence, as, "I have a book," and changing the object, the tendency on the part of the pupils will be to look only to the final word to determine the sentence. This should be corrected by changing the subject as well.

In the next changes, follow the order of the First
Step, introducing cautiously the common pronouns, adjectives, verbs, prepositions, and conjunctions. The names of the members of the class and the numerals up to ten should be early introduced. For suggestive lists, see explanation under First Step.

Words are always used in their connections and made familiar by repetition in the expression of various shades of thought.

**Analysis.** Soon after children begin to read sentences, it will be found that they recognize individual words. From the study of a sentence as a whole they have discovered the elements or words of which the sentence is composed.

The use the child makes of the words at this time is peculiar. He evidently recognizes them, but has no impulse to pronounce them separately, or at all, until the sense is complete in his own mind. If, when the sentence is written, a strange word be present, he will make no effort to read any part of it. When the unknown word is explained and the sense thereby made complete, he will read naturally and without hesitation.

This is a most healthful indication, and is a sure guide to the teacher in regard to the steps to be taken. It points out the exact difficulty which the
child encounters, and enables the teacher to remove the difficulty with the greatest economy of time and energy. The introduction of new words is placed entirely within the control of the teacher, and the vocabulary of the pupil may be extended in any desirable direction. Care must be taken that the more active pupils do not monopolize the time, depriving the other members of the class of their share of the benefits.

As words become recognized as such, and their meaning understood from their office in the sentence, it may be well to write them upon a section of the board set apart for that purpose, so that the pupils may refer to them in their constructive work, and be sure of the correct forms. These lists are for reference and no other purpose.

Writing. Early in this step some, if not all, of the children will have the impulse to write. This should be encouraged. The first efforts will be directed to copying what they see written upon the board, but as the thought expressed is present in their minds they are in reality writing to express their thoughts. The first productions will of necessity be rude, but by a few judicious hints their
muscles will be brought under proper control, principally through their own exertions.

The slates should be ruled to serve as a guide to the size of the letters. A few directions may be given in regard to holding the pen, the slant and size of letters, but not enough to distract the attention of the pupil from the thoughts he is endeavoring to express. In this way the children may attain great excellence in writing at an early period, and at the same time their penmanship will be as markedly individual as their faces.

**Letters.** While directing the writing the teacher will speak of the letters as though they were known to the pupils, showing the size of the m’s, t’s, l’s, etc., and it will soon be discovered that the pupils can distinguish the letters and name them. This end has been accomplished without calling direct attention to them, and by the operation of the same mental laws that caused them to distinguish words.

**Constructive Work.** One of the most important educational ends is the ability to express thought clearly and fluently in writing. By the method here given the pupils early acquire this ability, and though the thoughts at first are simple, the mode of expressing them may be made perfect. Writing
compositions is made as natural and easy as conversa-
tion, and the practice of reading compositions will
make true intellectual reading more easy and cer-
tain.

Criticism. By this method, drill as it is com-
monly practised is entirely dispensed with. The
thought is the first object of attention, and if this be
clear, the expression will be natural and correct.
Any obscurity, either from the use of a new word,
from the construction of the sentence, or from not
understanding the relations expressed, will manifest
itself in the inability of the child to read, or in his
giving expression to a different thought.

The effort of the teacher in such cases must be di-
rected to clearing up the thoughts. If the word is
new and the idea familiar, calling attention to the
idea will suggest the word or its equivalent. If the
idea and the word are both new, the teacher must
first develop the idea, creating in the mind of the
child the necessity for the word, and then give the
word. The custom of spending much time in “fish-
ing for words” from the child is an absurd one.
When the idea is fully developed, the word should
promptly be given, so that the two may be associ-
ated together.
It is very easy to destroy the independence of pupils and substitute mechanical for intellectual reading, by the teacher’s reading for the children to imitate and by concert reading. Both should be avoided.
CHAPTER III

READING FROM BOOKS

In the exercises so far, the end in view has been to prepare the child to enter upon the work of reading from the printed page. If the work indicated has been well done, the pupil has acquired considerable power of thought and expression; he has learned to regard the completed sentence as the expression of thought, and as having no significance unless the thought is understood; he has learned to read readily what is written, and he has acquired a considerable skill in the expression of his own thoughts, by crayon and pencil. If this has been accomplished, he will have little difficulty in changing from written to printed matter.

Steps in Transition. Let the pupils look over some printed sentence made up of familiar words, and expressing a familiar thought, and if they experience any considerable difficulty in gaining the thought from the sentence, it will show that they are
not ready for the change, and that written work should be continued.

When the time arrives for the transition, the teacher should select some easy lesson, and carefully examine it to find the words that the pupils will probably not know. These words are then to be made the basis of blackboard exercises in which their memory is developed, and they are used in the expression of thought by the pupils. In a familiar, conversational way, the teacher may excite an interest in the subject of the story, taking care not to tell the details so as to deprive the reading of the interest which comes from the new ideas obtained.

The books are put into the hands of the children after they are assembled in class. Let all the members of the class look at the first sentence, and when ready let each one raise his hand. Should a familiar word not be recognized in its printed form the teacher will write it on the board.

When all are ready the teacher will call upon one to "tell what the book says." The sentence will probably be correctly read. If mistakes are made in the reading, it will be because the pupil does not understand the sentence. Proceed in the same manner with each sentence to the end of the lesson.
If the class be large, the lesson may be read a second time by other members of the class, but care should be taken that the pupils do not learn the lesson by rote, and so repeat it without understanding. Intelligence is the key to good work, and should be the sole guide to expression.

**General Preparation.** It will require but few lessons to make the transition from the board and slate exercises to the book. When this is made and the pupils are able readily to read the printed words, the regular work for preparing each reading lesson should be in the following order:

**First**—As in the transition exercises, the teacher will become familiar with the lesson beforehand, and will give the books to the children after they are arranged in class. This is to assure freshness of thought in the lesson read.

**Second**—The pupils will look over the lesson for unfamiliar words, and will indicate them to the teacher. As the object of the exercise is to gain the thought, new words must first become known.

**Third**—The pupils will then close their books, and the teacher will develop the meaning of each word by questions and familiar conversation.

**Fourth**—The pupils will use the new words in the
construction of sentences, each one expressing a familiar thought. This kind of exercise has already become familiar to the pupils in their previous work.

Fifth—The new words, as their ideas are developed, will be written upon the board, so that the pupils may become familiar with their written forms. As each word is written it will be seen that the pupils will carefully scrutinize it, as though it was an object of interest.

Sixth—Pupils look over each sentence carefully to see if they can understand the thought expressed. In case they do not, the teacher will develop and explain it.

Seventh—The pupil reads. As the words are all known and the thoughts understood before the pupil tries to read aloud, his reading will probably be natural and correct.

Penmanship. The writing, begun with the board exercises, will be continued after the books are introduced. The impulse to write comes from the desire to express thought to the eye, and skill in the use of the pencil or pen is acquired under this stimulus. With the mechanic, the impulse which controls his muscles and gives direction and force to his action, is the end to be accomplished. The
knowledge of his tools is acquired indirectly and incidentally while using them. To withdraw his attention from the work and fix it upon the tools would be fatal to the work. So with the penmanship of the child. It should be acquired incidentally in the endeavor to express thought; and turning the direct attention from the thought to the writing, will be fatal to the highest success in writing. Intellectually, it would change a pleasing occupation into a mechanical and onerous task.

As the child learns the use of speech long before he learns the grammatical rules that govern speech, so he learns practically how to express his thoughts in writing long before he is in a condition to be benefited by the rules of penmanship. A few general hints may be given from time to time, as indicated in the Third Step, but the pupil’s progress will depend upon the amount of practice which he has in the direction pointed out. By this practice, his muscles are brought gradually under control, imperfections are eliminated, and the habit of correct writing is formed.

Composition. The first lesson which the child received was in the formation and expression of thought, which was in reality oral composition. As
soon as he acquires the ability to write legibly from copying the work from the board, he will begin to change his oral compositions into written ones. This constructive, written work will follow the same order, and accompany step by step the oral work already indicated. These first compositions furnish excellent reading lessons, for no two being alike one reads for the information of the others, conforming to the practice in real life.

Like all the other exercises in language, composition must not be taught directly, but success in it is attained incidentally in the endeavor to express thought. The ability of a child to use words correctly in oral or written composition is the only sure test of his understanding them. It requires far less familiarity with language to read mechanically, than it does to use the same language in the expression of our own thoughts.

Subject-Matter. The first lesson will be in connection with objects, as was given in the First Steps in reading. Next objects may be described. Then as new words are found, each one will be used in the expression of a thought and in the construction of a sentence.

The child may next be called upon to relate what
has happened to him during the day, the incidents of a walk, or a play, or what he saw on his way to school. The teacher may tell a story or read something from a book, which the pupils will reproduce. The children may bring their own little books, and each one may read a story which the others will reproduce. In these latter exercises another important educational interest is served;—the pupils are taught to listen to what is said, and to repeat accurately what they have heard.

Spelling. In this course no place is given to distinctive spelling lessons, as it is believed that such lessons are productive of little else than mischief.

Nearly all the real study of the child involves spelling as a necessary incident. If the forms of words which he has always seen are correct, the forms which he reproduces will also be correct. To him a misspelled word is either no word at all, or an unknown element to be learned like other new words. The misspelled word is not recognized as expressing the idea of the correctly spelled one. The child reads with his eye, and while reading is not conscious of the sounds of words. In the endeavor to express the thought in writing, his hand responds to the impulse which the thought gives, and in the
way it was given. As the thought was occasioned by form, speaking to the eye, it will of necessity be reproduced in the same form. Good spelling is the result.

Oral Elements. When oral spelling is practised, a disturbing element is introduced. The attention is partially diverted from the forms of the words to the names of the letters that compose them, and language, which should be used as a medium of thought, becomes the object of thought. The written and printed page is deprived of its distinctive character of being a direct representative of thought; the written words must be translated into spoken words through the medium of letters; and thus a direct barrier is interposed between the mind of the child and the thoughts contained in the lesson. This result is, of course, antagonistic to the eye and thought reading which is here advocated.

The phonic analysis of words should have no place in the primary schools. Until the habits of thought reading and correct spelling are well established, such analysis is a positive evil. It makes the child conscious of the oral element of words, and as these do not correspond with the written elements, a double evil ensues: the mind has become directly
conscious of language which it should use unconsciously or nearly so; and it introduces a new set of elements antagonistic to the ones used in the graphic expression. The habitual action of the muscles coming from one stimulus, upon which good spelling depends, is directly interfered with by another stimulus which urges to different results. The antagonism is radical and irreconcilable, and bad spelling must result. The reason for the early introduction of the phonic element—the securing of correct pronunciation, may be accomplished in another way. The pupils should be required to pronounce their words slowly, so as to give each sound its proper force, and here imitation of the words as spoken by others is the only way to secure correct results.

Correcting Mistakes. Under the system here advocated, mistakes in spelling, in punctuation, in the use of capitals, etc., will be rare, but they will sometimes occur. The teacher’s work should be as correct as human vigilance can make it, and by this means the pupil’s mistakes will be reduced to a minimum.

The mistakes usually made in school are the result of guess-work or of deliberate judgment, when language has become a subject of direct conscious-
ness. The mistakes made when this system is practised are the results of some distracting element which has for the moment disturbed habitual action. In the first case the mistakes, being in the line of habitual action, make a deep impression and tend to perpetuate themselves; in the second case, being opposed to habitual action, they make but little impression and are easily eradicated.

Upon noticing any error of this kind, the teacher should at once erase it, and substitute the correct form. The direct attention should be for the moment turned to this correct form, and the pupil should write the word several times to make the impression deeper. This is one of the rare instances where the direct attention may be profitably diverted from the thought to the expression. The sooner the object is accomplished and the attention again turned to the thought, the better for the pupil. The error should never be brought into prominence, and if it can be erased before the pupil has discovered it, all the better.

If a child is in doubt, he should indicate it, and the teacher should supply the correct form. The reason for this is obvious. The doubt has arrested habitual action, and made the word or phrase the
object of direct attention. If left without assistance, the mind must exercise a judgment without the elements upon which a correct judgment can be based, and the chances are about even that a mistake will be made.

A mistake occurring under such circumstances will make a deep impression, and will tend still further to disturb habitual action, becoming the parent of numerous future mistakes. Constant practice under judicious direction is the only way to secure the highest and best results.

**Reading Matter.** A great difficulty is experienced in obtaining a sufficient supply of appropriate reading matter. The book given to any class should be within their comprehension, and it should be read through, or such parts of it as are found interesting. An ordinary first or second reader will last but a few weeks, and hence there should be in every school several such readers, or some equivalent reading matter.

By the exercise of judgment and tact, the teacher may be able to secure several such readers for use, and as an important part of the reading exercise is for the pupils to learn to listen, it is not strictly necessary that each member of the class be supplied
with the same book. A single copy of a book may be passed from hand to hand, and in this way not only may the text-books be utilized, but story-books which the children have at home may be used with profit. From this variety in reading, supplementing observation, the materials are gained for any amount of composition in the form of constructive and reproductive work.

In general, children should be induced to read what they desire to know, and what is worth knowing, and for the purpose of knowing. Hence, all through the course silent reading, followed by reproduction, should receive special attention. A story or sketch may be passed from child to child and read silently, and then reproduced in writing. Sometimes it may be reproduced orally, and indeed oral and written exercises should be constantly intermingled, so that children may become equally proficient in both forms of expression.

Economies. It will be seen that reading, writing, spelling, and composition are simultaneous operations by this method, and that all are subordinated to the thought gained and expressed. In this way much time is gained, and the multitude of classes in ungraded schools is diminished. These subjects
are all related to each other, and are dependent upon thought; and to treat them separately is to destroy this relation and dependence.

Again, by this method these subjects are all taught incidentally. To teach them separately and directly is to deprive written language of its legitimate function of being a direct representation of thought.

**General Suggestions.** Too much stress cannot be laid upon the importance of careful and correct work on the part of the teacher. Children at this early age are confiding, and are ready to take what the teacher has to give; "bread or stones" are received with equal trustfulness. At the same time they are easily confused, and ill-directed teaching appears in a slovenly recitation.

The teacher must not be anxious for immediate results. Anxiety in this direction is a constant temptation to adopt those specious methods by which apparent, rather than real progress is made. The letter, word, or phonic method will each day accomplish certain specific results, which can be weighed and measured. Teachers, parents, and friends see this, and are satisfied. But the results leave little impress of true mental growth. Naming letters and words, no matter in what order, and remembering
them, is not necessarily reading. The thought must be reached, and everything else must be subordinated to this end.

The child learns oral speech by degrees, adding word after word to his vocabulary, as its necessity is felt in expressing his own thought. Each new thought and new expression is assimilated by use. In reading and writing, the same law holds. New elements should be introduced no faster than they can be made familiar by use. The expression follows the thought. In this way the mind of the pupil grows by receiving its proper aliment, and the power of expression increases with each new acquisition of thought.

In this process time is an important element. An effort to cram defeats its own ends. Hurry retards. Crowding the memory with words weakens it for thought. Filling the mind with the forms of language that convey no thought, is like filling the stomach with husks,—no digestion follows. Worse than this, the mind overburdened with this crude material loses all power and inclination for real work.

The time necessary for each step cannot be precisely given, as it must vary with the capacity of the pupils, the tact of the teacher, and various conditions
of the school. The pupils should not be advanced from the "First Step" until they are able to give oral expression to any well defined thought without hesitation. The average time for this will be about one month. The "Second Step" will require but few lessons. Its objects should be accomplished in a week.

In the "First Step" the practice of allowing the children to construct the concrete relations, or, as they term it, "make true" the thought before reading it, should be continued several weeks. This exercise, more than any other, arouses activity, both physical and mental, and excites a permanent interest in the work. The average time for accomplishing all the work of the "Third Step" will be about two months, giving three months for the preliminary exercises before books are introduced.

When the children read a sentence that cannot be literally illustrated, they should feel that it is true in thought, and here comes in the exercise of the imagination. In the development and culture of this faculty, the teacher may find some difficulty. With their limited experience, children with active imaginations have not learned to distinguish between outward facts, and thoughts which exist only in their
own minds. This want of discrimination is often mistaken for moral delinquency. The remedy is found in the close observation of objects and facts and the literal descriptions which follow such observations. Making sentences "true" is one of these corrective exercises.

A very common mistake should be carefully avoided, and that is the endeavor to fill the mind with the matured and condensed results of scientific investigation. True education is a growth. The knowledge upon which the mind feeds must be assimilated. This knowledge must be administered in such proportions and under such conditions as will best promote assimilation. The effort to cram ideas is as fatal as that of cramming words. The reasoning processes of maturity do not belong to childhood. The true education does not deal so much in the results of scientific discovery as in its methods. These methods are: first, the observation of objects, by which facts are obtained, and the observing powers cultivated; second, the expression of these facts in oral and written language, by which process the facts become clearly defined and permanently retained; third, the observation of relations, by which comparisons and generalizations are made,
and general principles reached; and fourth, the application of these principles, by which the more subtle relations are discovered, and the reasoning powers are fully developed. To reverse this process and commence with the reasoning would be equivalent to laying upon the shoulders of children the burdens of mature manhood. No matter with how much care this may be done, or what may be the apparent immediate results, the permanent result is distortion and deformity.
Helps in Reading and Speaking

1. *Old Stories Retold*. By PAUL BIERER. With 60 Original Illustrations. Boards, 16mo, pp. 64, 26 cts.
   This is the first of a series of books for supplementary reading, and will be found unusually interesting to children. It contains seven of the old-time favorites that have entered into the heart and the literature of the world, given in entertaining language, while the pictures will make the child's heart leap for joy. Send for a copy.

   This is a collection of pieces not simply compiled, but *edited for use*, after the style that has made Hamilton College famous as a school of oratory. The fresh and varied character of the selections makes the numbers excellent for supplementary reading.

   As the word method was a step above the alphabet method, so the sentence method is a step beyond the word method. "The unit of thought is the sentence," and if the child considers the words as units in learning to read, he must unlearn his habits of reading in order to read naturally. Mr. Farnham shows how much more easily children will learn to read, and how much better they will read, where this method is employed. The book is in general use all over the country—in Col. Parker's Cook County Normal School, among others. It is especially valuable for teachers' institutes.

   Simple and sound, with abundant practice.

   This was compiled as an aid in preparing programmes for Arbor Day exercises, and contains choice selections on trees, forests, flowers, and kindred subjects, particularly adapted for reading-classes.

10. *The Table is Set*. A Comedy for Schools, from the German of Bendix.
    By WEILLAND HENDRICK. Paper, 16mo, pp. 80. 15 cts.

    Paper, 8vo, pp. 24, 15 cts.
   This is perhaps the most amusing and appropriate play for a school-exhibition ever written. It is interleaved, and contains the music in full.

C. W. BARDEEN, Publisher, Syracuse, N. Y.
1. The National Primary Chart contains 88 pages, 30 x 40 inches, bound in cloth, beautifully lithographed in colors, and mounted on an adjustable revolving stand as shown in the cut. Price, $8.00.

2. The National Complete Chart, 54 pages, $15.50, gives lessons also in Arithmetic, Geography, History, Civil Government, Bookkeeping, Physiology, etc.

4. The Caxton Complete Charts, 54 pages, 24 x 36 inches, $15.00.
Libby's Reading for Training Classes

For years we have been obliged to reply to the inquiry for something to help prepare for the regents examinations in Reading, "No book is published which meets the requirements." This manual has been prepared expressly for this purpose. It follows the Syllabus closely, and gives clear and definite exposition of Emphasis, Slur, Pitch, Quantity, Force, Quality, Inflection, Cadence, Phrasing, and other technical terms, with abundant illustrations. It treats fully of Articulation, Enunciation, Accent, Gesture, Posture. It deals comprehensively with Material for the different grades, with lists of appropriate books. It gives directions for Primary Reading, with special treatment of the various Methods, Synthetic, Word, Sentence, Phonic, Phonetic, Word Building, Object, Group, Alphabetic, Rational, etc., so often called for in examinations. Under Intermediate Reading it deals with Word Study, Thought Getting and Giving, Correcting Errors, and Expressions. Under Advanced Reading it discusses Concert and Silent Reading, and Position. It offers chapters on Word Study, Spelling, and Penmanship.

Throughout everything is presented in perspective. A topic outline occupies pages 13-15. One of the distinctive features of the book is the abundance of illustrative sentences, which not only are apt but are drawn from distinguished sources, often with the name of the author, so that the pupil has good models before him.

There are discussions of such topics as Fairy Tales, Myths, and the like, and the manual throughout suggests thought and leads to formation of individual opinion. Its author has had experience as a teacher of teachers, and she has given here the work that has grown up in the class room and developed by actual use. It will not only prepare a class for examination, but it will broaden the minds of the pupils and make them better students of other subjects.

Cloth, 16mo, pp. 187, 50 cts.
Bell’s Expressive Reading

How often teachers say, “I do not obtain good expression in my reading classes.” It is not lack of knowledge that expression is necessary or of effort to secure it, but of knowing just how to go to work to secure it.

The author of this manual while principal of a ward school and afterward superintendent of schools in Racine, Wis., gave much attention to this subject, and was unusually successful there in securing expressive reading. In this book he has given here in detail the principles and processes by which he secured from his pupils appreciation and expression. Every plan outlined or suggestion made is the results of classroom tests.

To the teachers of New York he has made this manual especially helpful by arranging it grade by grade, in the form of comment upon the elementary syllabus in reading issued by the State education department, and he has inserted as illustrations the 80 selections there required for memorizing. The book becomes therefore indispensable in schools which are using this syllabus.

But the purpose of the book is broader than this. It aims to help teachers of reading everywhere, by making the reading class more interesting and its results more manifest. A chapter is given for the work of each grade, with full directions for conducting the class recitations, new features for word drill, phonics and seat work for the pupils.

The poems to be memorized are of great value, selected as they are by experts from the literature of English speech. They are given in full at the end of the chapter for each grade. Ample directions are given as to the manner of preparation of these poems by the teacher before presentation to the class. In some cases, the plan of class presentation in regard to dramatization, expression, and emphasis is worked out in detail by the use of one of the required poems.

The author believes pupils should read as well as they speak in common conversation, and the aim is to show how this may be accomplished.

C. W. BARDEEN, Publisher, Syracuse, N. Y.
Black's Graded Readers

This First Reader continues the plan of the P series of this series. It presents short and interesting stories and convolutions upon the interest of child life.

All language exercises, sentence lessons, color and study, etc., so frequently found in readers of grade, have been purged. The book contains a great deal of valuable information.

The art of reading is first and most important to be acquired in child and it should be treated dependently.

Toward the end of the book a few biographical stories of great American men and women of our nation a prominent feature of the series.

The vocabulary of this book is of the choicest character, and the style is unexcelled.

Other noticeable features are the attractive subjects, excellent illustrations, short sentences, natural composition, and general neatness of the pages.

After all the prime test of reading books for children is whether they enjoy reading them. Are the sentences natural? Are the pictures attractive? Are the little stories interesting? The question is not whether the teacher likes it, but whether the child likes it. Dr. Joh said the successful fisherman baited his hook not according to his own choice, but according to the taste of the fish. This book will be found to suit the taste of the children, and yet it is built on sound lines and is part of a wise and definite plan. Try it and see.

Cloth, 16mo, pp. 107, 25 cents net
Black's Graded Second Reader

That an elementary reader should entertain rather than instruct is now generally acknowledged, and that this reader entertains will be seen as soon as it is placed in a child's hands. Nevertheless the matter has been carefully prepared, so that the lessons may be wholly helpful. Moral lessons are not obtruded, but they are there, and the information incidentally presented is of a character to benefit as well as interest. There are brief sketches of Lincoln, Franklin, Webster, Whittier, Washington, Fulton, Benjamin West, Daniel Boone, Edison, and Oliver Wendell Holmes. In the last, there is an outline of his "One Horse Shay", with the picture given above.

Especial effort has been made to free the pages from all matter that might retard the perception and association of words in sentences. To this end the author has consulted many teachers on the character of the subjects, the effectiveness of illustrations, the arrangement of type, and the quality of the paper. It is believed that this book represents the very best combination of all these that can be produced.

Cloth, 16mo, pp. 155. 30 cents, net
Black's Graded Third Reader

When the subject permitted care has been taken in this reader to give the illustrations a touch of humor, always so welcome and so helpful to the child. The one here reproduced, for instance, from the story of "The Town Singers" (page 43) is one of the four pictures given, and all of them appeal to the child's sense of fun, so that he will turn back again and again to this story.

The especial thought in this reader is to enlarge the child's vocabulary by repeating words in many different relations. Facility in the use of a good vocabulary is the most valuable requirement in the early years of school life. Children learn the ordinary application of a large number of words very early in life, and these are the words they should learn to read fluently, before extending their vocabulary in the fields of literature and science.

The subjects have a high moral tone without being didactic, the children becoming the unconscious judges of character.

There are "Suggestions to Teachers", giving exercises recommended for elocutionary drill, to be studied after the pupils have read through the reader, including a well-known anecdote of the painter Stuart, "The Pauper's Drive" and a selection from "Spartacus and the Gladiators". The child has now reached a point where he may begin to take pride in reading effectively and there is much in this book to stimulate and develop the desire to read well orally.

Cloth, 16mo, pp. 212. 35 cents, net
Supplementary Readers

"I gave it to a little boy, and it has been read and re-read, and it is still going the rounds delighting the little folks. Please send me a dozen copies for my teachers, and charge with the new histories."—Sup't I. E. Young, New Rochelle, N. Y.

"These stories are a source of great delight to the children. When the story of the 'Seven Little Goats' was first published in the Bulletin, I cut it out and carried it to a little boy living next door. He was so much pleased with the story that he immediately read it through seven times."—Myra L. Ingalsbee, School Commissioner, Randolph, N. Y.

"There is as much study in the pictures as in the print, and I know the very boy to whom to give it."—George A. Cooper, School Commissioner.

"On reading them I was carried back to my boyhood days, and for a brief time, was listening to my mother again telling the story of Jack and the Bean-Stalk. * * * I am sure the children will thank you for printing books that they can read and understand. If I ever dictate a school library, books for the little children will be found in it."—Francis H. Godfrey, School Commissioner, Waterloo, N. Y.

"The story of a little girl who tried to teach her mother how to behave. It is only a morsel of a book, and can be read through in twenty minutes, but the twenty minutes will be well spent."—Sunday School Journal.

"Happy are the little folks whose pictures make such an attractive frontispiece to this little book, and who have such an Uncle Charley to tell them such a nice story about the Little Old Man, and the school for illiberal mothers. Likewise happy are all readers, both old and young, who are permitted to share the story with them. It is just the thing for the 'children's hour', when the little ones are getting quiet and ready for something at once bright and restful before they say 'Good-night'."—Public Opinion.

"The heroine is Nisby, a girl of seven, who is extremely fond of having her own way and much dissatisfied with her mother for declining to let her have it. A mysterious little man offers her the position of chief teacher in the school for illiberal mothers, and she sets out to give her mamma a lesson. The latter weekly submits when Nisby suggests more dessert, a walk in the hot sun and a ride on the elephant in Central Park, but poor Nisby comes home with such a headache that she resigns her position and lives contented and obedient ever after."—Springfield Republican.

3. The Young Scientist. By Herman F. Hessen. 16mo, pp. 189, illustrated. Manila 50 cts.; Cloth 75 cts.

This puts in the form of a story the work done by an Agassiz Association of school children that undertook to explore the neighborhood of the school with reference to elementary geological formations. It is so pleasingly told that it can hardly fail to inspire similar action in schools where it is read to great profit.
King Kindness and Other Stories

These eight stories have grown out of the work of the author in the public schools of Syracuse as an officer of the Bands of Mercy and of the Society for the Prevention of Cruelty to Animals. She felt that the principles of these organizations could be taught better by illustration than by precept; and as she could not find just the stories she wanted to use, she began to write stories herself, and tell them to the children. They took at once with the children, who listened to her with enraptured attention, and it is by request of the teachers of Syracuse that these stories are now published in book form.

They are fairy tales, and as such appeal to the interest and the imagination of children. But they deal with nature—with flowers and birds and animals, even with the clouds and the breezes and the months. The titles show the variety of topics: "King Kindness and the Witch", "Mother Nature's House-Cleaning", "The Naughty Raincloud", "The Story of the Lilies", "What the Maple Sugar Said", "Daisy's Trip to Fairyland", "The Trouble in Flowerland", "How Breeze became a Detective".

"That they are fascinating to children has been abundantly proved, but they are also wholesome and stimulating. They inspire sympathy with nature in all its forms, and kindness to all animate beings. For supplementary reading in school, and for the home circle nothing more attractive or helpful has ever been written.

Their attractiveness is increased by an abundance of illustrations by Louise A. Shrimpton, who has not only caught the characteristic poses of childhood, but has also shown a happy imagination in giving form to the breezes and the clouds, as well as to flowers and birds and animals. If you want to make your children happy, give them this book.

"They are charming fairy-stories, founded on nature facts, and designed for supplementary reading in schools. They have been daintily illustrated by just the kind of pictures that appeal to children."—Syracuse Post-Standard.

"A splendid collection of clean, bright stories, suitable in every way for children. They cannot offend the taste of the most fastidious parent or teacher; on the contrary, they will be cordially welcomed into every household, kindergarten, and school. There is a freshness and spontaneity about them which is charming and which cannot fail to appeal to the older as well as the younger generation. * * * All the mysticism and charm of the ancient tales are found in this new edition of fairy stories."—Syracuse Evening Herald.

Cloth, 16mo, pp. 118, 29 illustrations, 50 cts.
In this charming volume for children Mrs. Minnie Seamans Peck, who is both author and artist, has told and illustrated a story that will delight every child who reads it. We have all seen the faces in pansies, but here there is a whole family of them, each as individual in his actions as in his features. Every piece of clothing, every article they use, from pistol to automobile, is a real growing thing, that the children may see about them so that the book stimulates close observation of nature.

**Mamma and Baby Snowflake**

Illuminated Boards, 16mo, pp. 60, Illustrated, 50 cts.
Southern Stories for Little Readers

Teachers who have used this book often express surprise that this section of American life has not before been described in supplementary readers, there is so much that is novel and interesting to northern children in the stories of Max Ray's Christmas (p. 65) where there was no ice or snow and he went barefoot, A Ride on a Turtle (p. 87), A Sugar Cane Party (p. 89), How to Trap Gophers (p. 95), A Smart Crane (p. 98), and A Boat on Fire (p. 148). But apart from this feature, the stories are so told as to interest and benefit children. Those of Miss Fret-all-the-time and Miss Cheerful, Miss Careless-Untidy, and Miss Tidy, Mr Pro-cras-ti-na-tion and Mr. Prompt-do-it-at-once are manifestly stories with a moral, but they are so interestingly told and so amusingly illustrated that children are absorbed in the narration and take in the moral unconsciously. No other book offered for supplementary reading offers so much that will be novel to children.

Cloth, 16mo, pp. 154, 36 illustrations. 30 cts.
The Bailey Book

For supplementary reading this book has many distinctive features that entitle it to attention.

1. It is so simple that the youngest pupils may use it at the seat, unassisted, thus promoting independence. It is written for the average pupil, not for the exceptionally bright. It is easy all the way through; not in the first half only.

2. It has a small vocabulary, no lesson in the first 100 pages containing more than five new words. Yet it contains much more matter than most books of its grade, 130 pages; consequently the word repetitions are frequent, and the pupil becomes familiarly acquainted with the words. A list is given of new words, with the pages on which each appears for the first time.

3. The lessons are short, easy, and entertaining; the sentences are smooth and natural; the pupil will find it easy to read aloud with expression.

4. The 147 illustrations were without exception prepared expressly for this book. Some are from photographs; some are drawn boldly; all are of a kind to appeal to the child's interest, often to his sense of humor.

5. It contains suggestion for phonic drills, and is partly in script.

6. It is a practical book, made in the school room by a remarkably successful primary teacher, who knows the needs of both teacher and pupil. You will find it practically useful.

Cloth, 16mo, pp. 136, 147 illustrations. 35 cts. net.
The Story of Milo

This story of a Greek boy by Miss Ethelwyn Kuck, teacher of
English in Adelphi academy, Brooklyn, is the first to appear of
a series of books designed to cultivate oral expression in the
school by pictures of child life in the various stages of civiliza-
tion. This is part of the plan elaborated by Gurdon R. Miller,
late superintendent at Binghamton and now of the Greeley nor-
mal, which he has not only tried in his own schools but made
well-known throughout the country by his papers and addresses.

The story work of each grade should form a continuity of
subject matter. Abiding interest can be best secured by this
means. The stories for a term should be a successive series on
the same general subject. The term’s work should form a unit.
The interest of the child should be maintained, and his knowl-
dge be made stable and usable by the logical relations of the
several parts of the story work.

Following the belief that only the best and highest life of any
nation should be presented to little children, the Age of Pericles
is chosen as the historical setting for this Greek story. Athens
during the Periclean Age (459-431 B. C.) became the “City of
the Gods”. In twenty-eight short years the talent, refinement
and strength of the great Athenian statesmen influenced the civ-
ilization of the world.

The character about whom the work of this period centres is
that of a young Greek boy named Milo. He lived on the little
island of Delos, off the eastern coast of Greece. This island was
sacred to the sun god, and people came from far and near to wor-
ship Apollo on the “Holy Island”. During a year of the celebra-
tion of the Olympic games Milo went to Athens to visit his cousin
Glaucus and attend the games. Milo’s visit forms the basis of
the stories. The stories include the daily life in a typical Athen-
ian home; the school life; sports; social and political training;
children’s amusements; and the religious belief of the people.

A number of the myths of Greece have been chosen with refer-
ce to their worth and suitability and given in connection with
the above, and the book will be found interesting to all children.

Cloth, 16mo, pp. 171, 15 full-page illustrations. 30 cts. Teachers
edition, with Introduction by Mr. Miller, Notes. and Bibli-
otherapy. 50 cts.
This puts in the form of a story the work done by an Agassiz Association of school children that undertook to explore the neighborhood of the school with reference to elementary geological formations. It is so pleasingly told that it can hardly fail to inspire similar action in schools where it is read, to great profit.

Cloth, 16mo, pp. 189, illustrated, 75 cts.

New York is as remarkable in its history as in its geography. Here were the headquarters of the Indians; here were some of the most romantic of explorations; here were the most important battles of the revolution and of the war of 1812; here the Erie canal was built; here the first steamboat ran; here the development of commerce and of manufactures has been the greatest. To ride from Albany to New York or to Buffalo is to pass through a region full of historical associations.

These stories deal with the Indians, the explorers, the patroons; they tell of Champlain and Stuyvesant and Leisler; of the settlement of New York, the burning of Schenectady, the capture of Ticonderoga and Stony Point, the surrender of Burgoyne, the treason of Arnold. Most of the stories are told as by contemporaries—the narrative of the wounded soldier to his grandchild, the letter of the husband to the wife, of the son to his absent mother. They have all been used in the schoolroom and have all been found to be interesting to the children. Profitable they cannot fail to be.

The volume is in large and open type, in familiar conversational style, and handsomely illustrated, so that as a reader for children of the fourth to seventh grades it deserves a place in every school, and will be found among the most useful in every way.

Cloth, 16mo, pp. 119, 41 portraits and other illustrations. 50 cts.
“I gave it to a little boy, and it has been read and re-read, and it is still going the rounds delighting the little folks. Please send me a dozen copies for my teachers, and charge with the new histories.”—Sup’r I. E. Young, New Rochelle, N. Y.

“These stories are a source of great delight to children. When the story of the ‘Seven Little Goats’ was first published in the Bulletin, I cut it out and carried it to the little boy living next door. He was so much pleased with the story that he immediately read it through seven times.”—Myra L. Ingalls, School Commissioner, Randolph, N. Y.

“There is as much study in the pictures as in the print, and I know the very boy to whom to give it.”—George A. Cooper, School Commissioner.

“I placed this little book in the hands of my wife and I feel quite sure it has made glad the heart of a little boy, I agree with you that ‘The stories are well told, and the illustrations original and interesting.’”—Sup’r R. V. K. Montfort, Newburg, N. Y.

“On reading them I was carried back to my boyhood days, and for a brief time, was listening to my mother again telling the story of Jack and the Bean-Stalk. * * * I am sure the children will thank you for printing books that they can read and understand. If I ever dictate a school library, books for the little children will be found in it.”—Francis S. Godfrey, School Commissioner, Waterloo, N. Y.

“Our old friends, Jack and the Bean Stalk, Cinderella, the Smart Little Tailor, the Wonder Stone, and several others, all profusely illustrated and prettily told, make up this little book for the little people. The children never tire of hearing these stories. Mr. Binner and Mr. Bardeen have won their everlasting gratitude by bringing them out in this new dress.”—American Journal of Education.

Cloth, 16mo, pp. 64, 59 illustrations. 25 cts.
"The story of a little girl who tried to teach her mother how to behave. It is only a morsel of a book, and can be read through in twenty minutes, but the twenty minutes will be well spent." — Sunday School Journal.

"Happy are the little folks whose pictures make such an attractive frontispiece to this little book, and who have an Uncle Charley to tell them such a nice story about the Little Old Man, and the school for illiberal mothers. Likewise happy are all readers, both old and young, who are permitted to share the story with them. It is just the thing for the 'children's hour', when the little ones are getting quiet and ready for something at once bright and restful before they say 'Good night'." — Public Opinion.

"The heroine is Nisby, a girl of seven who is extremely fond of having her own way and much dissatisfied with her mother for declining to let her have it. A mysterious little man offers her the position of chief teacher in the school for illiberal mothers, and she sets out to give her mamma a lesson. The latter meekly submits when Nisby suggests more dessert, a walk in the hot sun, and a ride on the elephant in Central Park, but poor Nisby comes home with such a headache that she resigns her position and lives contented and obedient ever after." — Springfield Republican.

"For our part, we would rather teach moral lessons by stories like this than by all the precepts in a cyclopaedia of ethics. It is a real story—no child will question that; and an interesting story—no child ever began it and put it down before it was finished. And the lesson is one every child ought to learn and learn early. We do not know a better birthday or Christmas gift; in fact it will be our birthday gift to several nephews and nieces who do not need it more than other children need it, but who will profit by it." — American Journal of Education.

Cloth, 16mo, pp. 31, illustrated. 50 cts.
Aesop's Fables

An edition of Aesop in which every one of the 203 fables is illustrated by at least one picture has long been desired, and is here offered. The illustrations are from many sources, including Bewick and Doré, and were selected after long search and with great pains. The versification is by Thomas W. Chesebrough, and adds quaint humor to the original narratives. Cloth, 16mo, pp. 288, $1.00.
Egbert’s Last Words of Famous Men and Women

These famous last words are grouped for ready reference and quotation under such topics as “My Country, right or wrong”, “Not for self alone”, “They gave all for the Master”, “In His Name”, “From the earth to the stars”, etc. There is hardly a public address of any kind that may not be illuminated and strengthened by the use of this volume. Besides the well-known quotations, the source of which it is well to be sure of, there are a multitude of those as yet unfamiliar to the public but well worthy to enrich public utterances.

It is eminently a book for the school library. Its best purpose is not to be read through at a sitting, but to be picked up at odd moments, for fixing a few of these thoughts in the mind. Their influence may be momentous. Many a man can look back to such a thought as many of those here given for the inspiration which gave him a new purpose in life.

For opening exercises in school they have especial value. If one or more of these should be read every morning of the year, seeds of thought would be sown that would bless future generations.

Think of the influence of such last utterances as the following, put before a school with such explanation as to the circumstances as to show with what meaning they were fraught:

“All my possessions for a moment of time!” —Queen Elizabeth, p. 16.

“I am the King of Sweden, and I seal with my blood the liberty and the religion of the whole German nation.” —Gustavus Adolphus, p. 16.

“I thought that dying had been more difficult.” —Louis XIV, p. 20.

“I do not sleep; I wish to meet death awake.” —Maria Theresa, p. 20.

“Oh! better be a poor fisherman than meddle with the government of men.” —Danton, p. 41.

“To die for liberty is a pleasure and not a pain.” —Marco Bozaris, p. 46.

“This is the last of earth. I am content.” —John Quincy Adams, p. 55.

“Tell the man to fire faster and not give up the ship. Fight her till she sinks.” —Captain James Lawrence, p. 59.

“The road to heaven is as short by sea as by land.” —Sir Humphry Gilbert, p. 62.

“I only regret that I have but one life to lose for my country.” —Nathan Hale, p. 65.

“It will be but a momentary pang.” —John André, p. 66.

“Be virtuous, be religious, be a good man; nothing else can give you any comfort when you lie here.” —Sir Walter Scott.

“I only feel a certain difficulty of living.” —Fontenelle.

“I can feel the daisies growing over me.” —John Keats, p. 73.

“O Liberty, Liberty, how many crimes are committed in thy name!” —Madam Roland, p. 87.

“How grand those rays! they seem to beckon earth to heaven.” —Humboldt, p. 94.

Cloth, 16mo, pp. 192, $1.00
Selections for Memorizing.

1. Regents' Selections in Literature. Selections for Repetition from Memory at the Examinations conducted by the Regents of the University of the State of New York, in connection with the courses of American, German, and French Literature. Leatherette, 16mo, pp. 56. 25 cts. Each separate, paper, 6 cts.

These selections were officially prepared in the Regents' office, and published under the direction of Mr. James Russell Parsons, Jr. Besides their special purpose, they will be found admirable for use in classes.

2. Memory Selections from nearly 150 authors. By Chas. Northend. In three sets, Primary, Intermediate, and Advanced, each consisting of 36 cards printed on both sides, in neat box. Price of each box 25 cts.

The best apology I can make for my delay in answering your letter is to send you the enclosed check for 135 sets of Memory Selections. I shall probably call for an additional supply. I wish these selections could be used in every home and in every school-room throughout the land. They will surely accomplish much good, both intellectual and moral.—D. B. Hagar, principal State Normal School, Salem, Mass.

Your collection of Memory Selections came to-day, and I hasten to express my appreciation of the same. Nothing finer has ever come to my notice. Will send you an order in a few days. The cards are just the thing to have on one's library table. What pleasanter way is there to spend five or ten minutes, when one is obliged to wait that time, than with such a collection?—C. A. Holbrook, Lewis High School, Southington, Ct.

There has long been need of more philosophy in the arrangement of memory gems. We have here at a merely nominal price a classification of selections, so that a teacher can select discriminatingly that which he desires memorized.—New England Journal of Education.

This is one of the most admirable collections ever made, containing much that is unheady, and so entertainingly arranged that one who takes it up can hardly lay it down without looking it through to the end.

5. Education as Viewed by Thinkers. Paper, 16mo, pp. 47. 15 cts.

These quotations will be of especial service in normal schools and teachers' meetings.

Most of the stories are too long for the purpose, but some of them may be used with good effect.

7. Motives for the School Room. By A. W. Edson, State Agent of Massachusetts. Per set of 12 on heavy colored card-board 7x4 inches, printed on both sides. $1.00, post-paid, $1.10.

C. W. BARDEEN, Publisher, Syracuse, N. Y.
Helps for Public Exercises

   This was compiled as an aid in preparing programmes for Arbor Day exercises, and contains choice selections on trees, forests, flowers, and kindred subjects, with 60 pages of Arbor Day music, etc., etc. It tells what trees to plant, and how and when to plant them, tells how the day is observed in the different states, and gives specimen programmes in full. The music pages may be had separately for 25 cts.

   A particularly pleasing and effective dialogue in costume.

3. The Table is Set. A comedy for schools, from the German of Bendix. By Welland Hendrick. Paper, 16mo, pp. 30. 15 cts.

   These are perhaps the most amusing and appropriate plays for a school exhibition ever written. They are both interleaved for stage directions.

   This is not only a remarkably excellent collection, but is of special value because of its suggestions as to how each piece shall be spoken. Classified index to the pieces sent on application.

   This is a collection of pieces for speaking, not simply compiled, but edited for use, after the style that has made Hamilton college famous as a school of oratory. Send for table of contents.

Ballard's Pieces to Speak.

This collection is of special value because of its suggestion as to how each piece shall be spoken. The excellence and variety of the selections is shown by this classified index.

School Room Plays

This is a dialogue between a school teacher and her superintendent, requiring only two characters, and giving a most entertaining view of school relations, with a marked surprise at the close. It has given great satisfaction wherever used at school entertainments.

2. Children of Other Lands. P. 16:16. 15 cts. This is a play for young children, arranged by the pupils of the training class at Davenport, Ia., as a geography exercise. The Dutch boy enters in costume and is questioned about Holland, followed by a Swiss boy and girl, an Eskimo, an Italian girl, a Russian, a Turkish boy, a Chinese boy, two Japanese girls, an Indian, an Arabian, a French girl, and so on, giving fine opportunity by simple changes of dress to afford entertainment that is sure to please.

3. A Fairyland of Artists. By MABEL ADE. This is also a play for young children, who, as nearly as possible, represent the artists in costumes. The good fairy introduces Rosa Bonheur, Landser, Murillo, Reynolds, Van Dyck, Millet, Rembrandt, Da Vinci, Hoffman, Angelo, and Raphael, each telling enough about himself and his work to make a pleasing and instructive entertainment.

A particularly pleasing and effective dialogue in costume.

5. The Tale is Set. A comedy for schools, from the German of Bendix. By WELLAND HENDRICK. Paper, 16mo, pp. 30. 5 cts.
These last two are among the most amusing and appropriate plays for a school exhibition ever written. They are both inter-leaved for stage directions.

The Cleaves Library Table

This is the most convenient portable table for library purposes ever invented. Its construction is so simple that it can be made ready for service in a moment, and as quietly closed, and set aside when not in use.

The table when open is 33 inches high; it measuring 18 x 25 inches is well braced, and stands very firm. The top is adjustable and can be placed at any inclination, or made level by simply raising the outer edge.

The shelf attached to the back of the table also adjustable, and can be used either in a horizontal position as a support for models, books, lamp, etc., or can be raised nearly vertical, and be used for holding book, chart, or any article to be copied. The object is held in position by a small spring clip near the edge of the shelf. The book rest attachment will support a book of any size.

"A thorough trial of your combined table and desk has served to increase my liking for it; it seems to me altogether the handiest piece of furniture that I ever saw. But perhaps the best evidence of my feeling regarding it is to be found in the fact that I have already ordered a second one for the use of a secretary."—Hon. Andrew D. White, ex-president of Cornell University and former ambassador to Germany.
